Momentum Introduces SaaS-in-Motion

New Program Helps ISVs Quick Start and Grow SaaS Service Offerings

TORONTO, ONTARIO, May 2, 2007—Momentum Advanced Solutions Inc. (TSX:WWW), a leader in IT managed services and web development, recently introduced SaaS-In-Motion, a unique program that provides Independent Software Vendors (“ISVs”) with access to low-cost, on-demand infrastructure and services. The program helps ISV’s quickly start up and grow SaaS (Software as a Service) offerings. SaaS is a software application delivery model where an ISV delivers their software application for use by its customers over the Internet. Customers do not own the software but rather pay for using the software. SaaS-in-Motion includes enablement, Web infrastructure, access to technical and application development resources, financial and commercialization support.

"SaaS-in-Motion boosts an ISV's ability to provide SaaS to their clients efficiently and effectively," says Sheldon Pollack, CEO of Momentum. "The program is a win-win situation for everyone involved, including ISV customers who will get improved service with more flexible payment methods."

SaaS-in-Motion includes a broad range of services designed to help companies deliver SaaS offerings cost-effectively. In addition to project consulting, the program features access to Momentum's virtualized infrastructure, self service provisioning of development and production environments, on-demand processing, storage, and load-balancing, as well as network access, security, and access to highly skilled technical resources, such as information architects, .Net, J2EE and user experience experts.

Requiring no capital investment, SaaS-in-Motion provides variable payment models tied to a company's success and deferred payment for qualified companies. The program also provides access to Momentum's direct and indirect sales channels and industry experts.

"We're seeking high growth-oriented partners for this program, emerging companies poised to deliver the next generation of Web services," says Pollack. "In order to grow our own business, it is essential we add these types of companies as part of our extended solutions partners," he added.

SaaS hosting requirements differ substantially from those designed for traditionally established organizations. These companies' needs fluctuate dramatically with changes in customer demand, so their requirements are constantly evolving. To meet this challenge, Momentum developed the "SaaS IT Utility Platform," a unique virtualized and highly scalable, self-provisioning infrastructure. This platform allows companies to take advantage of Momentum's technological firepower including professional services, servers, storage, networks, operating systems and middleware when needed. With SaaS-in-Motion, ISVs can start small and grow as their business grows, with virtually no risk to themselves.

Companies interested in pursuing this program can go to <http://www.managedhostingpro.com/saas.html> for further information.
